ZAP™ Premier Filter Tips

The Ultimate in Pipette and Sample Protection

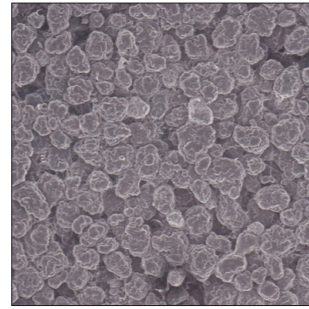

- High purity filter tips for the protection of your sample and pipette from contamination
- Made from medical grade polypropylene with 10 μm pore size polyethylene filter
- Tips and Racks autoclavable at 122 C for 15 minutes
- Lot tested and certified free from RNase, DNase, Human DNA and Endotoxins
- Designed to fit a wide range of pipettes

 **alpha laboratories**
supplying quality to science

Protect Your Pipette

ZAP™ Premier filter tips feature a unique 10µm pore size filter. These pores are 10% smaller than those in most other filter tips and effectively trap aerosols containing DNA, radionucleotides and other contaminants, preventing them from entering the barrel of the pipette and keeping it clean.

10µm pore filter

Protect Your Sample

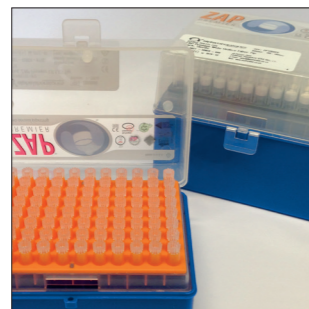

The filter also works to protect your sample. It blocks fluid passage so that in the event of over-pipetting; your sample will not be absorbed and can be completely dispensed without any loss. Contamination of the sample by the filter is avoided as it is made from high purity polyethylene and inserted robotically into the tip. Every batch of tips is tested and certified to be free of RNase, DNase, Human DNA. They are also certified as non-pyrogenic including the filter.

Lot by lot Purity Testing

Protect Your Budget

ZAP™ Premier filter tips are sensibly priced to take account of restricted budgets and what's more, due to the high density of the filter, ZAP™ Premier filter tips are autoclavable. That means, if you don't use the entire box of tips, they need not be wasted. You can sterilise them again and the filters will not warp.

Excellent Value

Empty Racks

The empty boxes can be used to re-rack your Fastrak tips of a similar volume.

Can be reused
